## DESIGN INTENT

The design is a celebration of student-driven learning and making. Kindergarten through fifth grade students are introduced to C-STEM subject matter in a practical manner using experimentation, while sixth through eighth grade students have the opportunity to focus deeper on concepts that pique their interest.

## SOLUTION

Large, highly-visible, collaborative makerspaces line the heart, or the arroyo, of the building, fostering student awareness of their peers' work. Common student areas and circulation paths are crafted to allow for some separation between elementary and middle school students, while maintaining connectivity and a sense of community.
