RE: Designtex PFAS Status

Designtex has long been a champion of eliminating red-listed chemistries, having worked diligently to remove flame retardant and antimicrobial additives from our upholstery offering and reducing the use of unnecessary finishes across our line. To continue this long-standing commitment to human health, Designtex became a PFAS-free company on October 1, 2024. We took this step, one that goes beyond state-specific bans and labeling requirements, to guarantee all specification and purchases of our products do not contain PFAS.

Please note the following actions related to our status:

Orders:

No shipments will go out of any material containing PFAS from Designtex after October 1, 2024. No inventory is available of PFAS-containing products in our warehouses after this date.

Compliance:

Designtex products shipped on or after October 1, 2024 meet CA AB 1817 and do not contain any regulated PFAS.

Website and Sampling specifications for Designtex products:

PFAS-containing finishes were eliminated from our offering. Some alternative stain resistant finishes that do not contain PFAS are now offered in our line. All relevant specifications on our website (in filters, product detail pages, and spec sheets) have been updated to indicate no PFAS. All Optional added finishes also do not contain PFAS.

Please note that stain repellent/resistant finishes listed on sample tickets in the field will be updated as part of our standard sampling replenishment. To that point, please refer to our website, which always reflects our current state.

If you should have any further questions, please contact your Designtex account specialist.

Thank you,

Carol Derby
Vice President
Research and Development
